DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-2, 7-8, 11-14 and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshilawa(4,745,610) in view of Cooper et al.(6,078,204).

Claims 1 and 13, figure 6 of Yoshilawa discloses an optical semiconductor element(51) that is a load attached to circuitry containing zener diodes(41 & 42).

Yoshilawa does not disclose the recited circuitry.

Figures 4 and 6 of Cooper disclose a circuit(90) connected to a load(18) having a series rectifying circuit including a plurality of zener diodes(34, 36 & 38) connected in series, and a rectifying element(66) whose anode is connected to an anode of the series rectifying circuit. The circuitry disclosed in Cooper protects the load(abstract).

Claims 2 and 14, the circuit disclosed in Cooper includes a voltage supply(20) which supplies a higher voltage to a cathode of the series rectifying circuit than to a cathode of the rectifying element.

Claim 7, if the optical semiconductor element disclosed in Yoshilawa is used as the load disclosed in Cooper, it would be protected from a voltage exceeding a predetermined value by a breakdown of the zener diodes.

Claims 8 and 20, the voltage that is applied to the load disclosed in Cooper is adjusted by a breakdown of the zener diodes when a voltage exceeding a predetermined value is applied.

Claims 11 and 18, the optical semiconductor element(51) disclosed in figure 9 of Yoshilawa is a light emitting element.

Claims 12 and 19, figure 9 of Yoshilawa also discloses an optical semiconductor element that is a light receiving element (61).

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the zener diode circuit disclosed in Cooper with the semiconductor element load disclosed in Yoshilawa to protect the semiconductor element load as disclosed in Cooper.

3. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshikawa in view of Cooper as applied above, and further in view of Palara(5,521,414) and Hastings(6,617,906).

Yoshikawa and Cooper do not disclose short circuited NPN or PNT transistors.

Claims 5-6, Palara discloses that a rectifying element can be a NPN transistor(col. 4, line 22). Figure 4 of Hastings discloses a transistor(M3) whose collector and base are short-circuited.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the transistor type and connections disclosed in Hastings and Palara with the device disclosed in Yoshikawa and Cooper for improved limiting of high

voltages as disclosed in Hastings.

4. Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshikawa in view of Cooper as applied above, and further in view of Palara and Edwards et al.(4,975,798).

Yoshikawa and Cooper do not disclose short circuited NPN or PNT transistors.

Claims 5-6, Palara discloses that a rectifying element can be a NPN or PNP transistor(col. 4, line 22). Figure 2 of Edwards discloses a transistor(Q11) whose collector and base are short-circuited.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the transistor type and connections disclosed in Edwards and Palara with the device disclosed in Yoshikawa and Cooper for improved limiting of high voltages.

5. Claims 9-10 and 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshikawa in view of Cooper as applied above, and further in view of Palara.

Claims 9 and 16, figure 1 of Palara discloses placing all semiconductor and circuit elements monolithically on the same semiconductor substrate.

Claims 10 and 17, the semiconductor and circuit elements disclosed in figure 1 of Palara can be accommodated in a same package.

It would have been obvious to one of ordinary skill in the art at the time of the

Application/Control Number: 10/648,214 Page 5

Art Unit: 2828

invention to form the elements disclosed in Yoshikawa and Cooper on a single substrate in a same package so that they will take up less space as disclosed in Palara.

Allowable Subject Matter

6. Claims 3 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter. The following limitations are primarily responsible for distinguishing these claims over the prior art.

Regarding claims 3 and 15, the limitations concerning the zener diodes having parasitic components that generate a current upon irradiation of a light thereto.

Response to Arguments

- 8. Applicant's arguments filed September 22, 2005 have been fully considered but they are not persuasive.
- 9. Yoshikawa is not used to disclose rectifiers in series. Cooper is used to disclose rectifiers in series as referenced above.
- 10. A proper prior art rejection does not require a prior art reference to suffer from the same draw back as a claimed invention.

Application/Control Number: 10/648,214 Page 6

Art Unit: 2828

11. The above rejections do not rely upon Yoshikawa for the disclosure of zener diodes. Cooper discloses these elements as referenced above. Figure 3 of Yoshikawa is not used in any rejection; consequently, its content is irrelevant.

12. Cooper and Yoshikawa are analogous art because both concern circuitry containing zener diodes. Proper motivation for the combination is referenced above.

Conclusion

13. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Correspondence

14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Jim Vannucci whose phone number is (571) 272-1820.

Application/Control Number: 10/648,214 Page 7

Art Unit: 2828

Any inquiry of a general nature or relating to the status of this application should be directed to the Technology Center whose telephone number is (703) 308-0956.

Papers related to Technology Center 2800 applications only may be submitted to Technology Center 2800 by facsimile transmission. Any transmission not to be considered an official response must be clearly marked "DRAFT". The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Technology Center Fax Center number is (703) 872-9306.
